Efficient Snack Food Packaging at Dramatically High Speeds

Ishida’s ultra high-speed and reliable snack food bagmakers create quality bags, reduce product and film waste, and provide seamless integration with weighers and a wide range of ancillary packaging devices.

Atlas’ innovative rotary jaw motion and superior control technology enable packaging speeds up to 250 bpm with unbeatable performance and production efficiency.

High-speed Rotary Jaw Motion

Ishida’s exclusive sealing jaw design supports continuous motion packaging at 250 bpm with accurate film registration and tight bag seals.

High Throughput Efficiency

Designed under the ITPS Ishida Total Packaging System concept, Atlas bagmakers support integrated operation with Ishida multihead weighers, maximizing line capacity.

System integration is available in either a single scale/bagger direct overmount configuration or a twin configuration, enabling optimum weighing and packaging productivity in limited floor space.
High Productivity with Minimum Loss

Atlas bagmakers feature exclusive control technology in the sealing jaws and film feeding/product charging processes, maximizing productivity, and minimizing raw material waste, film loss, and downtime for film changes.

Sealing

- **Uniform backseals without wrinkles**
  The backseal unit with a hot steel belt runs synchronized to the film, creating quality vertical seals without wrinkles even during high-speed packaging. Backseals are instantly cooled by an air blower, creating secure seals even on overlaps with end seals.

- **Tight seals on any film**
  Pressure, temperature and sealing time can be easily set on the Remote Control Unit (RCU) to match the production speed and film characteristics, creating optimum seals for any film characteristics.

- **Multiple jaw motion**
  The Atlas series has multiple types of jaw motion to meet various film characteristics.
  - **Rotary jaw motion (ATLAS-222, 122, 122C, 112C)**
    - Supports high-speed (250 bpm) packaging with continuous rotary jaw motion.
    - Film is sealed by high pressure and an anvil knife, creating secure, airtight seals even for films with thin sealant layers.
  - **D-motion (ATLAS-202)**
    - Maintains a long seal time even at the highest packaging speeds, so even thick films are tightly sealed.
    - The air fill volume can be adjusted to meet bag inflation specifications.

Product Charge Control

- **Ishida original stripping device**
  A stripping mechanism reliably strips any remaining product from the seal area, preventing product in the seals.

- **Original Ishida former shape**
  Ishida has developed an original former shape and N2 gas flushing system that prevent product from being blown upward and insure even product charging.

- **BB blow function**
  Inflating the bags prevents product in the seal caused by unsettled product.

Change-over

- **Easy film splicing**
  Enables completely automatic film changes while the machine is running, further reducing downtime.

- **Auto-splicer (option)**
  When the film needs to be changed, a splicing plate suction and secures it, making splicing fast and easy.

- **Automatic film centering**
  When you need to change product or bag size, just enter the bag width from the RCU to have the film roll centered automatically.

- **Bag length calculation**
  A function that automatically calculates the bag length using the regmark sensor eliminates the need for manual bag length input.

Film Feeding

- **Precise film feeding for high-speed packaging**
  - **Load cell driven film tension control**
    Ishida’s unique load cell provides real-time detection of the load applied by the film to the dancer rolls. The load cell automatically controls the feed rate to maintain constant film tension.
  - **Pull-down belt**
    A pull-down belt controlled by a servo motor holds the film securely, enabling precise film feeding even during high-speed operation.

Reliable
User-friendly Design and Easy Set-up

The Remote Control Unit (RCU) has intuitive, easy-to-use controls that make operation easy. The clear and easy-to-read screens prevent operator errors and simplify procedures, minimizing machinery downtime and maximizing production efficiency. The ITPS Ishida Total Packaging System design concept enables operation of all integrated devices from a single operation screen, making settings and preset operations easy to change.

Easy-to-Operate Remote Control Unit

The easily understood icons displayed on the RCU make it readily understandable and easy to operate even for inexperienced operators.

Product Image Registration

By registering and displaying product photos taken with the RCU’s camera in preset screens, product packages can be checked at a glance during operation, preventing product selection errors.

Minimum Keystroke / Touch Panel Operation

RCU screens can be changed by selecting their tabs, providing quick and easy access to the required page.

ITPS Ishida Total Packaging System

Ishida’s Atlas bagmakers can be interfaced with a system containing a high-speed Ishida CCW-R multihead weigher, Ishida TSC-R seal checker, and Ishida DACS-Z checkweigher. All equipment can be operated from a single unified operation screen, making it extremely easy to change settings and preset operations.

An option enables integrated system operations with metal detectors and printers.

Versatile Packaging Solutions

Atlas bagmakers support a broad range of packaging line layouts to meet user needs for speed, packaging type and film material. Integrating Atlas bagmakers with Ishida multihead weighers optimizes packaging line performance and improves the packaging room environment.

Direct Overmount Configuration

The easily understood icons displayed on the RCU make it readily understandable and easy to operate even for inexperienced operators.

Integrated Operation with Ishida Strip-Pack Applicator

When integrated with Ishida’s F-SPA Flexible Strip-Pack Applicator, Atlas bagmakers can provide strip packaging ideal for product displays in retail stores.
